OS Deployment

Reduce Cost and Increase Quality with CapaInstaller OS Deployment

Easy to manage - yet powerful

CapaInstaller OS Deployment is an out-of-the-box solution that lets you configure and deploy Microsoft Windows operating systems. By providing a versatile solution built on field experience, best practices and Microsoft technologies, CapaInstaller OS Deployment provides a simple-to-deploy, easy-to-manage, reliable and yet powerful solution.

Automated and Remote Deployment

You can automate deployment of any Microsoft operating system, ranging from Windows 2000 to Windows Vista, including Windows Server. Remote initiated automated reinstallation and support for automated complex naming of computers is built-in.

For initial deployment, simply boot the computer using Preboot Execution Environment (PXE) or other bootable media and enter a computer name - the selection of the computers brand and model is automated and the operating system is installed from an image without requiring any further user input.

"It used to take a whole day to install a new PC. With CapaInstaller OS Deployment it only takes a few minutes."

- Randers Central Hospital

You can automate deployment of any Microsoft operating system, ranging from Windows 2000 to Windows Vista, including Windows Server. Remote initiated automated reinstallation is built-in.

An ITIL-compliant solution

A unique feature of CapaInstaller OS Deployment is the enabling of change management.

CapaInstaller OS Deployment

- Automated Zero Touch installation. of Windows operating systems and drivers.
- Automated configuration and definition of settings.
- Standardized Deployment of multiple Microsoft operating systems in one simple solution.
- Reduce Operational Cost and TCO.
- Enable Process driven deployment.
- Optimize end user productivity.

OS Deployment is an ITIL-compliant software solution. With full history on all changes made during daily operations combined with built-in scalability, you can scale out to worldwide locations while maintaining full operational control of all components.

CapaInstaller OS Deployment is process driven and has been developed on the basis of years of experience with best practice internationally. This enables IT organizations to increase end user productivity, reduce support time and minimize operational costs.
